DETAILED ACTION

Allowable Subject Matter

1. Claim 1 and 3-9 are allowed (renumbered as 1-8).
2. The following is an examiner's statement of reasons for allowance: many references in the art disclose an apparatus comprising: a sub-control circuit for controlling a motor; a main control circuit for sending out to the sub-control circuit a control signal to control the motor; wherein the sub-control circuit comprises a power-on resetting circuit for implementing a reset by switching on and off a power supply, wherein the main control circuit comprises power supply control means for temporarily cutting off the supply of power to the sub-control circuit when the main control circuit detects an abnormality in the sub-control unit, such as found in Sato et al. (US 5,511,161). The prior art of record does not teach or suggest, in the claimed combination, a vehicle headlamp apparatus comprising: optical axis direction changing means for changing the direction of a light-emitting optical axis; a sub-control circuit provided integrally on the head lamp for controlling the optical axis direction changing means; and a main control circuit causes a power supply control means to continue to maintain the power supply cut off state when the main control circuit repeatedly detects an abnormality in the sub-control circuit after the power supply control means has been activated.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
